

## LEGO® building class

Velociraptor

Triceratops

- Our specialized Bricks 4 Kidz LEGO Technic® kits contain 182 parts such as, axles & motors. Bricks 4 Kidz has over 270 lessons & models! We promise each term & each year has new, exciting themes, model builds & challenges. This term's units are "**Jurassic Brick Land**" & "**Construction Craze**".
- Each class we first **learn** about the **model topic**, then we **build a LEGO® model** to match! Within our class we cater & teach to **different levels by having 2 versions** of each model. **Younger students** will start off with the version with **less bricks & pieces**. **Older students** get harder models to build & challenges including **remote controls, changing gear ratios** or modifying models.
- Each student creates a **LEGO® mini-figure** to use in every class & **take home** at the end of term. Students will collect weekly **hand outs** summarizing what we learned in relation to STEM. They will take home a **zipper case** keep them in, & a **note pad & ruler** for measuring LEGO®.

## Enrollment
